At the start of Term 3 the grade three and four students had the opportunity to participate in an ‘i Sea, i Care’ program. They learnt all about the dangers of littering and the effects it has on our oceans. The students loved seeing a Blue whale's teeth and bones in real life and could not believe their size. At the end of the session the students discussed all of the ways they could keep our marine life safe and dispose of rubbish correctly. Since the incursion the students have been passionate about keeping our yard as clean as possible to protect our water ways.
